

The Computer Club's fall presentations promise to be an exciting lineup of topics catering to those looking to enhance their digital skills. Not necessarily in chronological order, here is what is planned:

Overview of the Club's mission and fall presentations

The series of presentations will kick off with an overview of the Club's presentations for the season. It is a chance for all to learn and newcomers to understand the Club's mission and for returning members to rekindle their passion for technology.

Computer Frauds and Scams

This presentation delves into the world of online security and digital pitfalls. Members will learn how to spot and avoid computer frauds and scams that often lurk in the shadows of the internet, threatening to compromise their personal information. This presentation will be by a Lee County Sheriff's Office specialist.

Overview of AI

The Club takes a look at Artificial Intelligence (AI). Members will gain insights into this transformative technology's history, applications, and future possibilities.

QR Codes, What They Are, How to Use Them

This interesting presentation will be "all about QR codes," those enigmatic squares of black and white. Members will discover QR codes and how to harness their power for various purposes, from quick website access to contactless payments.

How to Maximize Use of YouTube

With YouTube being a treasure trove of information and entertainment, the Computer Club will explore ways to maximize its use. From creating and managing channels to curating playlists, members will learn how to become savvy content consumers or creators.

Filling Out Forms - PDFs, Docusign

Navigating the world of digital paperwork will become a breeze as the Club tackles the intricacies of filling out forms. Special attention will be given to working with PDFs and using Docusign for electronic signatures.

In-Depth Using the Enhanced Search Functions of AI

The power of artificial intelligence will be harnessed during this session as members explore the depths of AI-driven search functions. Members will learn how AI can optimize search results and enhance their online research capabilities.

Learning the New Outlook

As technology continually evolves, so do the tools we use. This presentation introduces members to the latest features and functionalities of the new Outlook, ensuring they stay up-to-date with their email and productivity needs. The new Outlook will replace the "Blue Envelope" and the Outlook web app sometime in 2024.

SharePoint - What's New The presentation on SharePoint unveils the latest enhancements and capabilities of this collaborative platform, helping members leverage its full potential for research and document management.

How to Create a Fillable Document

Creating user-friendly, fillable documents will become second nature as the Club dives into document design. Members learned how to craft forms that were both professional and easy to complete.

What's New in W11 (Windows 11)

To wrap up the fall sessions, the Club explores the latest operating system from Microsoft--Windows 11. Members will discover the new features and improvements that come with this update, ensuring they can make the most of their computer experience.

With the conclusion of the fall presentations, Computer Club members will have a wealth of new knowledge and skills, ready to tackle the digital world confidently and enthusiastically.

See you at the first meeting!
